

ERS Telephone, Internet & SMS Registration

When using the ERS Telephone, Internet and SMS Registration solution, Xpress customers have access to a seamless process that generates and processes their telephone and internet registration returns.

So what does the ERS, Telephone and Internet Registration Solution do?

- Automates the generation of the step 1 security references and step 2 return file.
- In Xpress Register users have access to a seamless option which automatically extracts the updates from ERS and uploads these straight into the Xpress Register.
- As part of the upload from ERS, a unique step 4 blocking file is automatically generated to prevent those electors, who have already returned their canvass form, from using the telephone, internet or SMS service.
