

Xpress AES 256 Zip Encryption

The Xpress AES 256 Zip Encryption software provides users with the ability to generate compressed encrypted files to the AES 256 standard.

AES is an encryption standard adopted by the US Government with the design and strength of the AES 256 key length sufficient enough to protect classified information up to TOP SECRET level.

- It removes the need to have a separate process to extract, compress and then encrypt data as this is done in one step from within Xpress Register.
- It encrypts PDF files as well as standard Microsoft documents.
- Allows users to adhere to their own internal security policies by sending sensitive data in an encrypted format.
