

Xpress WebReg

Xpress WebReg is an intranet read only Xpress Register access solution.

So what is Xpress WebReg?

- It is deployed via the intranet making it an attractive solution for those authorities wanting to provide a read only solution to their One Stop Sections, Call Centres and external departments such as Planning, Council Tax etc.
- Allows the ERO to specify the security levels of access that users will have to the system.
- Allows the ERO to specify the forms and letters that users will have access to.
- Can allow for forms and letters to be generated by the Xpress WebReg user but have them printed directly to the ERO offices for checking prior to distribution.
- Provides non-electoral users with a simplistic name and address enquiry solution, which enables electoral departments to safely and securely re-direct general queries.
- The solution can be displayed within a CRM solution and automatically interrogated using a UPRN.
